

# IT MAINTENANCE SERVICES

*Managed services model that empowers businesses and individuals to deploy and manage critical IT infrastructure sustainably.*

Computers have become the backbone of modern work—driving efficiency, innovation, and competitiveness across every sector. With rising demand, global giants are producing devices at scale, and businesses are racing to build IT infrastructure to keep pace with industry change. Yet, managing that infrastructure is increasingly complex: regulations are tightening, priorities are competing, budgets are constrained, and privacy and security risks are growing.

Traditional outsourcing models—staff augmentation, time-and-material contracts, and capital-heavy approaches—simply don't deliver the agility or sustainability organizations need today.

## Our IT Solutions Model

Our Managed IT Services empower both businesses and individuals by ensuring reliable, secure, and cost-efficient technology. With proactive support, monitoring, and cloud integration, we reduce risks, extend device lifecycles, lower costs, and create sustainable impact by preventing e-waste.

- 1. Global Remote Technical Services**  
Quick problem resolution anywhere.
- 2. Devices as a Service (DaaS)**  
Flexible access to latest devices.
- 3. Email Support & Troubleshooting**  
Seamless communication reliability.
- 4. System Maintenance & Monitoring**  
Proactive issue prevention.
- 5. Cloud Backup & Integration**  
Secure data continuity.
- 6. Security & Virus Protection**  
Safeguard against cyber threats.
- 7. Annual Maintenance Contract (AMC)**  
Long-term trust and sustainability.

## Value Proposition

- 1. Lower Operational Disruption** : We minimize outages and reduce mean time to repair, ensuring systems stay available when they're needed most.
- 2. Predictable IT Spend** : By shifting from unpredictable CapEx to manageable OpEx through DaaS and AMC, organizations gain financial clarity.
- 3. Improved Productivity** : Employees spend less time waiting for fixes and more time focusing on core tasks. Seamless IT support removes friction from daily operations.
- 4. Stronger Security Posture** : Our proactive protection reduces risks of breaches and costly remediation. Privacy and compliance are safeguarded across devices and networks.
- 5. Sustainability Gains** : Extended device lifecycles and certified recycling directly reduce e-waste. This supports ESG commitments and demonstrates corporate responsibility.
- 6. Faster Time to Value** : Ready-to-use devices and integrated cloud backup accelerate deployment. Businesses can launch initiatives without delays or technical barriers.

## End-to-End IT Maintenance Solution at a Single Destination.

*“With a single click, you gain access to proactive IT services that enhance operational efficiency, resolve critical business challenges, and strategically align technology with long-term growth and sustainability goals.”*

### The Value You Unlock

## Proactive IT Maintenance Support

Proactive Maintenance

Transparency at Every Step

Direct Access to Expert

Cost Efficiency

Enhance Security

Sustainability Impact

## Roadmap & Future Plans

**Phase 1.** We are focused on strengthening our circular technology model to support the Global Goals by reducing e-waste. Through DaaS, refurbished products, and AMC services, we solve major IT challenges while creating benefits for both people and the planet.

**Phase 2.** Our priority will be scaling DaaS and AMC models to deliver predictable IT spend across industries. At the same time, we will reinforce cybersecurity frameworks to meet evolving compliance standards and embed sustainability practices like refurbishment and certified recycling.

**Phase 3.** We aim to establish ourselves as the leading circular IT partner for OEMs and enterprises. By leveraging AI-driven lifecycle management, we will provide predictive insights and build real-time information platforms.

# Why Egreen Infotech?

*We don't just deliver IT services—we create measurable value with every engagement.*

*We simplify complexity by streamlining how your organization buys, manages, and optimizes its entire device fleet.*
